

Absolute Reliability

is your goal.

Defeating process disruptions is your challenge.

Today's high-tech process industries rely on precise control of process equipment. When process equipment fails, profits fall. Common electrical disturbances and wiring problems can disrupt an entire manufacturing process. Every year, such problems cost U.S. companies billions of dollars in scrap material, down time, and delayed orders. We have helped hundreds of electric utilities and their customers resolve their power quality problems and generate millions of dollars in additional profits. Power quality solutions. Power quality monitoring. On-site investigations. Power quality training.
